

MaceLock™ All-In-One Proximity Keypad Reader

Item Code: AC-874-739

MaceLock™ Standalone Access Control

SUMMARY

The MaceLock™ all-in-one proximity keypad is an economical one door access control system, fully integrated in a single unit for standalone keyless entry applications. You get the benefits of managed keyless entry without the inconvenience and maintenance expense of issuing physical keys and replacing locks when keys go unaccounted for.

User access activation and deactivation programming is easy to manage via secure keypad command codes and proximity programming credentials. If you are using a keypad access code, simply enter the authorized number and the door will unlock. If using a proximity credential, present the authorized card or card+PIN and the door will unlock. Its installation is easy; equipped with a six conductor cable for wiring a 12V DC power source, lock, and exit button if desired.

The MaceLock™ all-in-one series compact design is cost-effective, easy to install and simple to manage.

FEATURES

- Economical compact design for keypad or credential access control
- Backlit keypad, LEDs, and sounder annunciation
- Configurable single or multi code operation
- Configurable silent or audible operation
- Configurable time and toggle unlock operation
- Supports wrong code retry lockout
- Supports fail safe and fail secure lock installations
- Supports exit device for free egress or remote door unlock applications

SPECIFICATIONS

Users	1 to 2,000
